

## SLAC CAN OUTSIDE PRINTING INSPECTION SYSTEM

The SLAC Can Outside Printing Inspection System is ideal to guarantee high printing quality for beverage and food products.

Utilizing SLAC's unique algorithms and software techniques, the system can unwrap the cylindrical surface of an un-oriented container automatically and acquire a 360-degree image of the can. Any defective container will be ejected from the conveyor.

SPC, modular design and simple user interface designed for changeover are additional customer benefits.
